

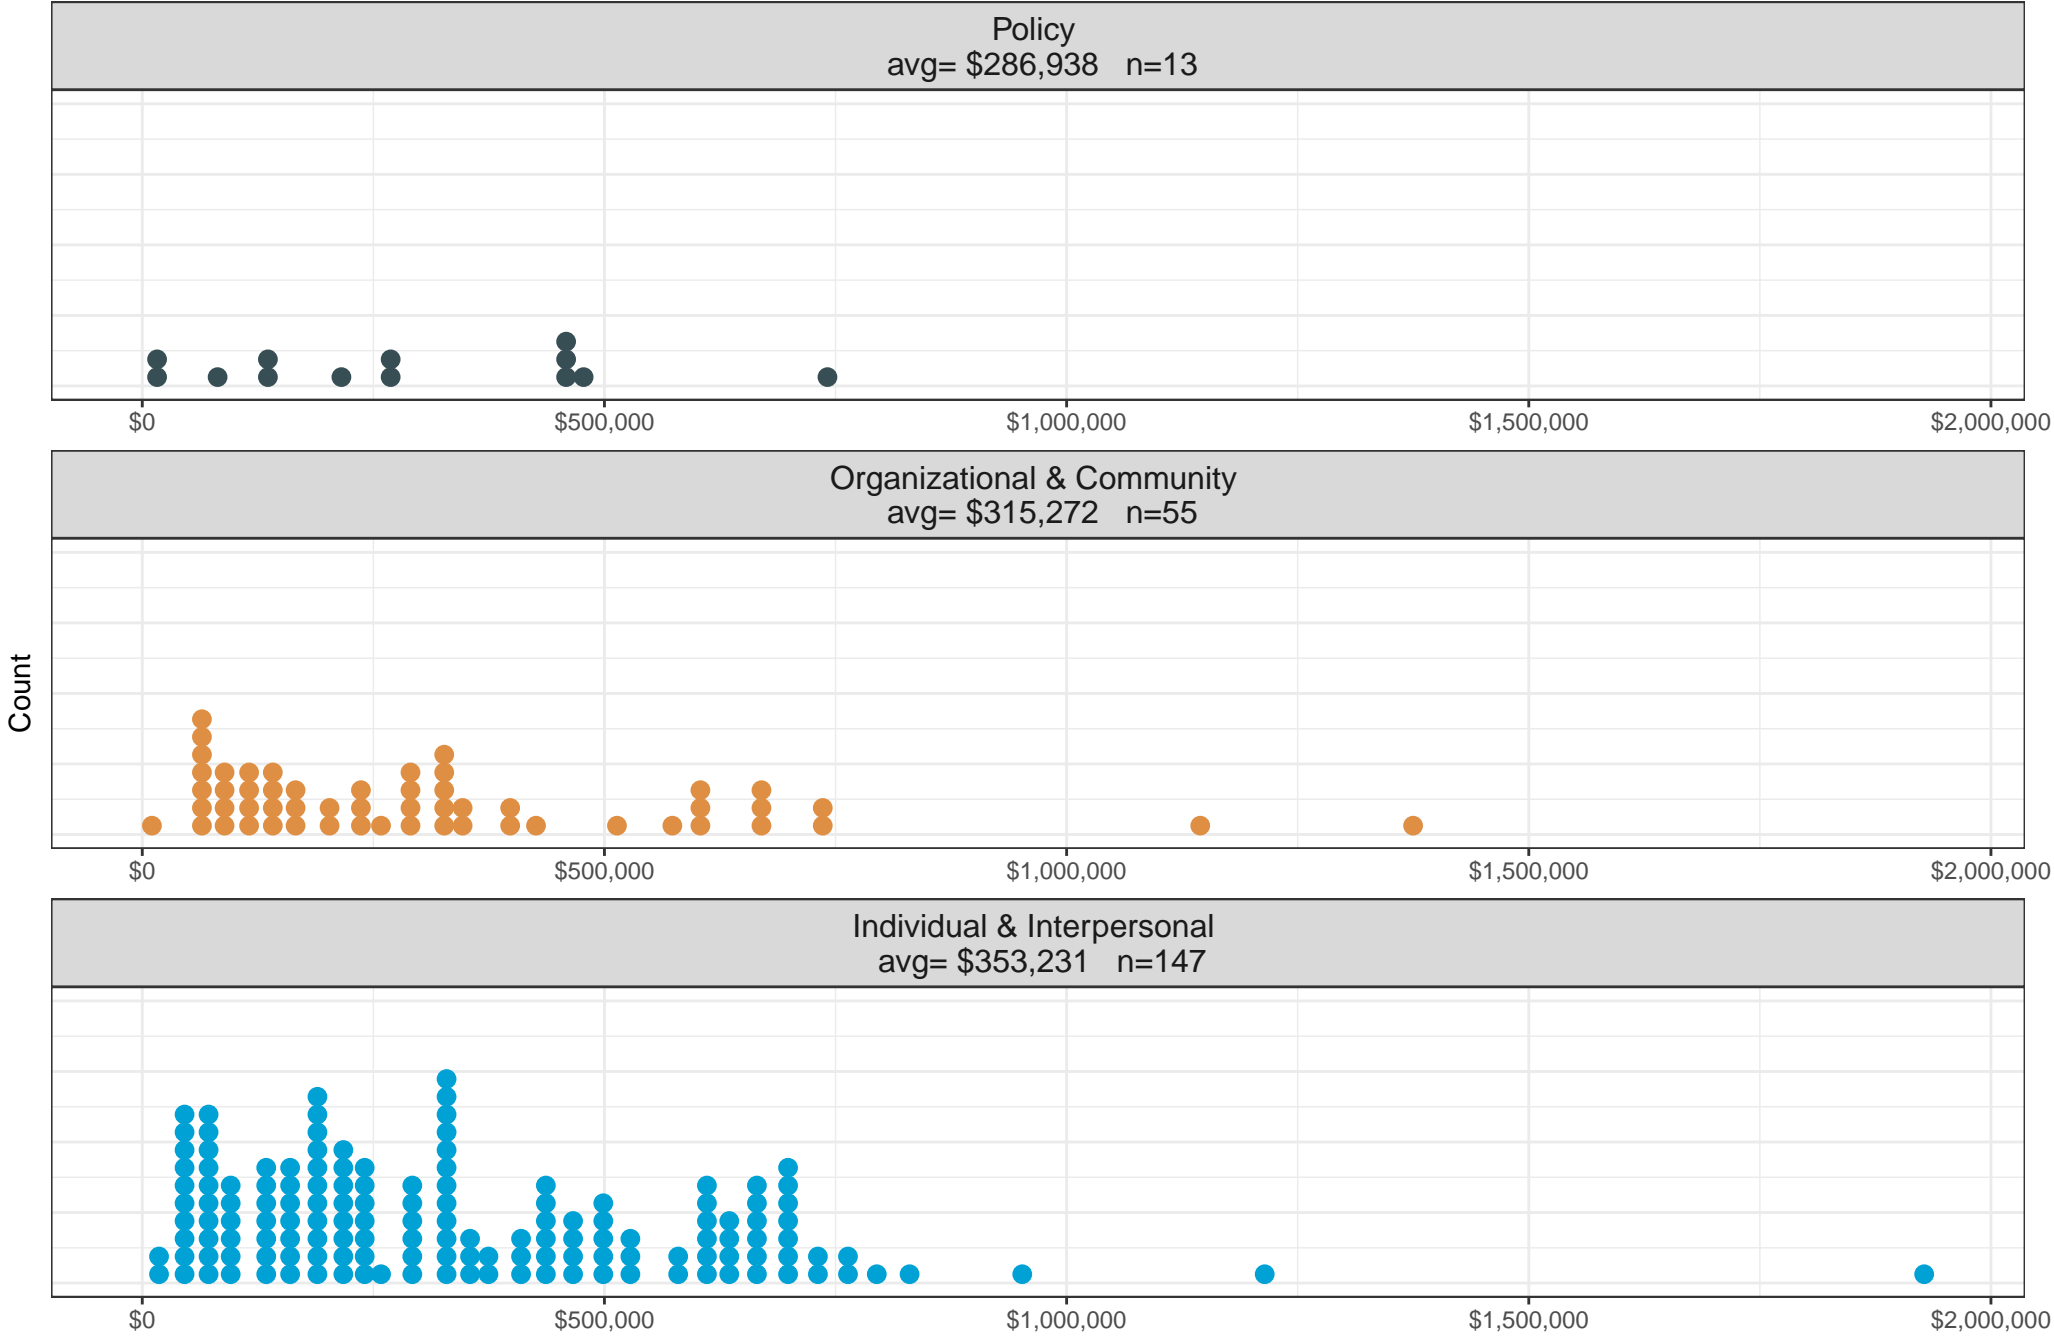

Figure 1: Distribution of average yearly funding of included projects

The majority of projects focused on on lower 'levels' of the social ecological model, and on average, those projects received more funding.

Notes: Projects were classified into levels of the social–ecological model by study team members. One researcher classified all 250 studies, two researchers each reviewed a random 10%. The model was not applicable to 20/250 studies. Figure excludes studies with missing funding resources: 29 (indiv/inter), 15 (org/comm), and 5 (policy). If a study targeted more than one level, average funding is divided equally among levels. Median funding amounts: \$298,941 (indiv/inter), \$243,270 (org/comm), \$257,178 (policy). Total n (included + excluded) do not add to 230 because studies could examine 1+ level of the social ecological model.
